What we do

3DGuy provides high quality 3d visualisation services which include:

3d visualisations

Every design has a story

3DGuy’s high impact photo realistic visualisations can help tell your design concept stories.

3DGuy provides high quality 3d architectural visualisation services which include:

- Photo realistic 3d visualisations
- Architecture mood shots
- 2D/3D floor plans
- 3D architectural master site plans
- 3D photo montages
- 3D concept designs
- 3D landscape designs
- 3D animations
- 3D interior virtual tours
- Rich multimedia presentations featuring music, titles, voiceovers and other content.

3DGuy visualisations span across a number of industries including retail, commercial, residential, advertising and product design.

We bring your design concepts to life

Working together with architects, property developers, interior designers, product developers, construction companies, selling agents, advertising agencies and artists, 3DGuy visuals effectively illustrate design concepts and brings them to life.

3d visualisations in virtual reality (VR)

3D visualisations in VR offer immersive experiences of digital models

With VR 3D visualisations, architects, designers, property developers or marketing and product managers, can offer clients immersive experiences of their digital models.

With the use of a standard modern smart phone and a simple economical mobile VR headset (such as our Google Cardboard viewers), clients can now be transported into the 3D visualisation virtually immersing themselves in the designed space. This offers an unmatched experience of visualisation as though standing within a scaled photorealistic mock-up of the proposed space. It allows you to virtually walk around a new concept building before its construction avoiding costly post-build alterations.

3d product design visualisations

Seeing is believing

Whether you’re designing tools or an experience centre, whatever the need, 3DGuy can create your product in virtual models with lifelike accuracy.

3d product visualisations can communicate the features or workings of your product design to a prospective client or investors. Visuals can also then be used to promote the product to market.

3d printing & 3d scanning

High precision prototyping

3DGuy also offers high precision prototyping that is professional full colour 3D printing for industrial or commercial use.

3D scanning is able to capture real-world objects or environments and construct digital 3-dimensional models. It can assist product developers with precise measurements of the physical objects and reduce the number of prototype design cycles.

Branded Google Cardboard virtual reality (VR) viewers

Separate your brand from the competition

Virtual reality (VR) now gives businesses a creative, innovative and unforgettable way to introduce your products or services!

Forget the old school brochures – with VR, you can bring your brochures to life and captivate your audiences by enabling them to virtually experience your products or services as if they were already there!

3DGuy offers full colour custom branded virtual reality viewers to help you maximise your brands awareness in a captive and innovative way!

Viewers are made from durable laminated cardboard and offers real value for money with a longer lasting, easily cleanable option. They also come in a company branded protective sleeve for easy storage!
Portfolio

The high quality, photorealistic visualisations created by 3DGuy never go unnoticed. Here are a few of the visualisation projects worked on in the corporate, retail and residential industries.
